JC4712
S-100 calcium-binding protein A12 - human
N;Alternate names: calcium-binding amniotic fluid protein 1 (CAAF1); calgranulin C; calg
utrophil protein
C;Species: Home sapiens (man)
C;Date: 10-May-1996 #sequence revision 19-Jul-1996 #text_change 09-Jul-2004
C;Accession: JC4712; JC4891; S56113; S56114

"Rabbit polymorphonuclear neutrophils form 35S-labeled S-sulfocalgranulin C when incubated with inorganic [35S]sulfate.";
                                             one calcium ion
calcium ions per
amounts found in lymphocytes.

-!- MISCELLANEOUS: In the absence of zinc binds one calcium ions por molecule, in the presence of zinc binds two calcium ions por molecule.

-!- SIMILARITY: Belongs to the S-100 family.

-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                     This sequender represents the CAAFI calcium-binding protein isolated from bovine amnictic fluid. CAAFI belongs to the S100 protein family, which includes calcyclin, MRPB, and MRP14. Intracellular calcium ion concentration is one of the key factors for intracellular signal concentration. The calcium signals are transduced by various calciumbinding proteins, such as the protein encoded by this sequence. CAAFI is normally expressed in squamous epithelial cells, neutrophils and macrophages, but atypical epithelial cells are negative for CAAFI and overexpression is observed in several types of cancer cells and neutrophils/macrophages infiltrating cancerous lesions. Detection of CAAFI (using antibodies in usual immunoassays) can be used to diagnose carcinoma of the skin, oesophagus, lung and cervix), and skin and blood diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

interaction with RAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide (P1). The EN-RAGE peptide binds to RAGE which is a member of the immunoglobulin superfamily of cell-surface molecules. A compound capable of inhibiting the interaction of EN-RAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory lupus nephritis, septic shock, endotoxaemia, or an autoimmune or inflammatory disorder in which the recruitment of EN-RAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The present sequence represents the bovine corneal antigen which shows homology to the human EN-RAGE N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bovine; EN-RAGE; extracellular novel RAGE binding protein; receptor for advanced glycation endproduct; inflammation; inhibition; antiinflammatory; immunoglobulin; cell surface molecule; septic shock; systemic lupus erythematosus; inflammatory lupus nephritis; endotoxaemia; autoimmune disorder; inflammatory disorder.

A novel bioactive metal RNA polypeptide (RNP) has a RNA component including the sequence AAT62568 and a polypeptide component having the sequence AAW01826, which is encoded by AAT62569. The RNP, or anti-RNP immunoglobulins, can be used to modulate and/or analyse angiogenesis and the vascular state of mammalian tissue, transfer genetic information in cells and selectively alter the nucleic acid content of cells. Leukocytes from pig's blood were cultured in medium, and the supernatant treated with NH4 sulphate at 35, 45 and 90% saturation to precipitate protein fractions. The residual supernatant was diltued to 45% NH4 sulphate saturation and concentrated by ultrafiltration using a 0.5 kD membrane. The retenate was purified to give 8 mg of product described as monocyto-CuRNP

This invention describes novel copper-containing ribonucleoproteins which are ternary complexes of an $100 protein, copper ions, and RNA comprising the following consensus sequence or its complement GGAAAUNNNNUMAUGNICATE the following consensus sequence or its complement GGAAAUNNNNNUMAUGNICATE (CUNNNUUNNNNNAAAANO-1UANAAACAUNO-5CUUNAGNO-13AGAA-AUNO-16UUAGCAG where course (1) cell-selective morphogenic action in vitro on isolated primary and/or cloned blood capillary endothelial cells in culture for the non-mitogenic induction of the change in cell phenotype from the confluent state, for non-mitogenic alteration of the spatiotemporal supracellular organisation of cells into three-dimensional organoid, capillary-like structures in culture, (2) a specific chemotropic action on blood vessels in vivo, (3) induction of directional growth of blood vessels in vivo and (4) induction of neovascularisation of tissues through directed ingrowth of blood vessels. Their use for modulating angiogenesis is claimed
                                                                                                                                                                                  63

The present invention describes an isolated human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide (PI). The EN-RAGE peptide binds to RAGE which is a member of the immunoglobulin superfamily of cell-surface molecules. A compound capable of inhibiting the interaction of EN-RAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory lupus nephritis, septic shock, endotoxaemia, or an autoimmune or inflammatory disorder in which the recruitment of EN-RAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The present sequence represents Endo Lys C which shows homology to the human EN-RAGE N-terminal amino
                                                                                                                                                                                                                                                                 Bovine; EN-RAGE; extracellular novel RAGE binding protein; receptor for advanced glycation endproduct; inflammation; inhibition; antiinflammatory; immunoglobulin; cell surface molecule; septic shock; systemic lupus erythematosus; inflammatory lupus nephritis; endotoxaemia; autoimmune disorder; inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide, useful for identifying anti-inflammatory compounds that inhibit its interaction with RAGE.

```
The present N-terminal peptide is from the bovine serum heparin binding protein (SHBP)-10. SHBP-10 has a mol. wt. of about 8-12 kDa by SDS-PAGE under reducing conditions, fibroblast growth promoting activity, and is useful as a wound treating agent
                                                                                                                                                                                                  ); bovine; serum heparin binding protein; SHBP-10; promoter; wound treating agent.
                                                                                                                                                                               Bovine serum heparin binding protein (SHBP)-10 N-terminal peptide
                                                                                                                                                                                                                                                                                                                                                                     Serum heparih binding protein (SHBP)-10 - is a fibroblast growth promoting protein, useful as a wound-treating agent.

Bovine, EN-RAGE, extracellular novel RAGE binding protein; receptor for advanced glycation endproduct; inflammation, inhibition; antiinflammatory; immunoglobulin; cell surface molecule; septic shock; systemic lupus erythematosus; inflammatory lupus nephritis; endotoxaemia; autoimmune disorder; inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                           New human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide, useful for identifying anti-inflammatory compounds that inhibit its interaction with RAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an isolated human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide (P1). The EN-RAGE peptide binds to RAGE which is a member of the immunoglobulin superfamily of cell-surface molecules. A compound capable of inhibiting the interaction of EN-RAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory lupus nephritis, septic shock, endotoxaemia, or an autoimmune or inflammatory disorder in which the recruitment of EN-RAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The present sequence represents the specifically claimed human EN-RAGE N-terminal amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide #10689 encoded by human foetal liver single exon probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                        Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide #11058 encoded by probe for measuring placental gene expression.
  expression; single exon nucleic acid probe
                                                                                                                                                                                                                                                                                                                            NO 35818; 639pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human; placenta; antenatal diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4 0 0 0 0

I genome-derived single exon nucleic acid probes useful for analyzing expression in human placenta.
                                                                                                                                                                                                                                                         The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    measuring heart cell gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; gene expression; heart; microarray; vascular system; cardiovascular disease; hypertension; cardiac arrhythmia; congenital heart disease.

                                                                                                 The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                          c acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                       expressed probe encoded protein SEQ ID NO: 37220.

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                            exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           exon probe encoded protein SEQ ID NO:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ij

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver.
(I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence
brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; liver; cirrhosis; hyperlipoproteinaemia; hyperlipidaemia; hypercholesterolaemia; coronary heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful gene expression in human adult liver.
                                                                                                                               40000

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes
                                                                                                                                                                                                                                                                                                                                                                                                       Human peptide encoded by genome-derived single exon probe SEQ ID 35692
                                                                                                                                                                                                                                                                                                                                                                                                                           Human; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; pulmonary ciliary dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             probes, used to

caid expressed in the human lung; measuring gene expression in a sample derived from human lung; comprising all contacting the array with a collection of detectably labeled nucleic acids derived from human lung comprising all contacting the array with a collection of detectably labeled nucleic acids derived from human lung array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryotic genome, comprising (a) identifying exons from genomic sequences of having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon probe, comprising (a) identifying exons from genomic sequence by the method above and/or cell types using hybridisation to a single exon in several tissues and/or cell types using hybridisation to a single exon for caparays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the corpososy period granes (CC of 12011 sequences, mentioned in the specification, or encoded by the corpososy period exons in a gene, particularly using human comparises of the exons in a gene, particularly using human cancer, chronic obstructive pulmonary disease such as asthma, lung dasease (LID), familial idopathic pulmonary disease such as asthma, hastocytosis, lymphangiolecomyomicasis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/proded by a single exon probe of the invention. Note: The sequence date for this patent disease. The present sequence is a peptide/proded by a single exon probe of the printed specification, but was obtained in electronic format \$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

$24146
$-100 protein P - human
C;Species: Homo sapiens (man)
C;Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 09-Jul-2004
C;Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 09-Jul-2004
C;Accession: $24146; PS0340
R;Becker, T; Gerke, V; Kube, E.; Weber, K.
Bur. J. Biochem. 207, 541-547, 1992
A;Title: $100P, a novel Ca(2+)-binding protein from human placenta. CDNA cloning, recom; A;Reference number: $24146; MUID:92339442; PMID:1633809
A;Accession: $24146
A;Status: preliminary
A;Molecule type: mRNA
A;Reference number: BESC>
A;Cross-references: UNIPROT:P25815; EMBL:X65614; NID:936177; PIDN:CAA46566.1; PID:93617
R;Emoto, Y: Kobayashi, R: Akatsuka, H.; Hidaka, H.
Biochem. Biophys. Res. Commun. 182, 1246-1253, 1992
A;Title: Purification and characterization of a new member of the S-100 protein family A;Reference number: PS0340; MUID:92171935; PMID:1540168
A;Accession: PS0340
A;Accession: Pyoe: protein
A;Residues: 1-31, TY, 33-84, X: 86-91 <EMO>
A;Experimental source: placenta
C;Genetics: Commun. Commu
                       A; Many position: 1921-1921
A; Introns: 50/3
A; Note: the first intron occurs before the initiator codon
C; Complex: heterodimer and higher complexes with calgranulin A (see PIR:BCHUCF)
C; Superfamily: S-100 protein; calmodulin repeat homology
C; Keywords: blocked amino end; calcium binding; EF hand; heterodimer; inflammation; IF; 2-114/Product: calgranulin B #status experimental <MAT>
F; 2-114/Domain: calmodulin repeat homology <EF1>
F; 54-86/Domain: calmodulin repeat homology <EF2>
F; 54-86/Domain: calmodulin repeat homology <EF2>
F; 2/Modified site: blocked amino end (Thr) (in mature form) (probably acetylated) #s
F; 113/Binding site: phosphate (Thr) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GGCCTGGATGCTAATCAAGATGAACAGGTCGACTTTCAAGAATTCATATCCTGGTAGCC

Nagasaki K.;
"A novel calcium-binding protein in amniotic fluid, CAAF1: its
amounts found in lymphocytes.
MISCELLANEOUS: In the absence of zinc binds one calcium molecule, in the presence of zinc binds two calcium ion molecule.
SIMILARITY: Belongs to the S-100 family.
SIMILARITY: Contains 2 EF-hand calcium-binding domains.
